

## ABSTRACT OF THE DISCLOSURE

A steam cooker composed of at least one cooking element having a peripheral lateral wall and a pedestal having a steam  
5 production base. The at least one cooking element and the pedestal are constructed and dimensioned to allow the at least one cooking element to be placed in either an upright position on the pedestal to hold a food being cooked or in an inverted position on the pedestal so that the peripheral lateral wall  
10 at least partially envelopes the pedestal.
